A lateral radiograph of a dog's forelimb. The image shows the humerus, radius, and ulna. The humerus is on the left, and the radius and ulna are on the right. The elbow joint is visible, showing the articulation between the humerus and the radius/ulna. The bones appear well-defined with some trabecular detail. There is a small, dark, circular artifact on the left side of the image, possibly a marker or a piece of equipment. The background is dark, and the overall image is in grayscale.
